EDUCATION

Stanford University - *B.S. in Computer Science | AI Conc. | Minor in Data Science | GPA: 3.75/4.0 | 2022 - 2026*

- Coursework: NLP+CV with DL, design and analysis of algorithms, systems, mechatronics/circuits, and music.

EXPERIENCE

Product Manager Intern - [TikTok](#), Seattle June 2025 - Aug 2025

- Incoming Summer 2025 Product Manager Intern focused on driving long-term CSP e-commerce business development on TikTok by leveraging the power of recommendation and personalization.

Data Analyst / Software Engineer Intern - [VALUENEX](#), Palo Alto Sept 2024 - May 2025

- Headed the development of Radar 2.0, the next-generation core product for VALUENEX, delivering a 90% speed improvement and incorporating advanced features like network analysis and LLM-driven interpretation.

Product Management Intern - [ADVANCE AI](#), Singapore June 2024 - August 2024

- Led product vision and strategy for an internal MLOps pipeline aiming to enhance document OCR and IQA across diverse global document identification methods to scale our services for our enterprise client, TikTok Shop.
- Identified inefficiencies in internal annotation workflows and led the transition to an outsourced, custom solution.

Software Developer - **Stanford Graduate School of Education** Jan 2024 - April 2024

- Headed the full-stack development of an multithreaded AI syllabus feedback tool with content suggestion systems utilizing AI-generated search queries and web scraping to provide current, relevant educational content.

Machine Learning Student Researcher - **Stanford Artificial Intelligence Laboratory** Jan 2024 - April 2024

- Researched integrating formal proofs from ITPs (Lean) into LLMs to enhance their mathematical reasoning.
- Improved Llama-7b's autoformalization scores on the MATH benchmark in probability and counting by 4.6%.

Social & Marketing Chair - **TreeHacks, Stanford's Annual Hackathon** Nov 2022 - April 2024

- Implemented a data-driven marketing strategy across social platforms leading to a 52% increase in applications, attracting a record-breaking 10,000+ applicants from 320+ universities with a 70% completion rate.
- Achieved 35% growth in social media followings and a 1,308% increase in accounts reached within a month.

PROJECTS

[Teensy Smart Glasses Audio Synth System](#) (Present) Teensy Microcontroller, Arduino, ESP32 Seed XIAO

- Designed and built a wearable smart glasses audio system from scratch, owning all hardware, embedded software, and product decisions to map motion, mic input, TinyML CV, and touch into real-time ambient audio effects.

[“Overcooked” Competition Robot](#) (2025) Arduino UNO, many sensors

- Configured multiple Arduino Unos with sensors, motors, and actuators to build an autonomous robot chef.

[Carbonle](#) (TreeHacks 2025) React.js, Climate Trace API

- A geographical Wordle-inspired game utilizing real-world carbon emissions data visualized with Treemaps.

[CribU](#) (Present) React Native, Firebase, Cursor

- Stanford internship/full-time roommate matching app. Received 750+ impressions on beta announcement day.

[Loci: Memory Palace](#) (2024) Swift, SwiftUI, Apple Vision Pro, Reality Kit, Blender, Bezi

- XR app using the [Memory Palace](#) technique to allow users to attach and interact with virtual 3D objects and lists.

[MimicSpeech](#) (2023) React.js, Flask, OpenAI API, Azure, Azure TTS, GCP, Docker, Stripe

- Multilingual-learning web app with NLP and *synchronized speech* to improve foreign accent and speaking ability,

Languages: Python, C++, C, JavaScript, TypeScript, Swift, R, SQL | React.js, React Native, Node.js, Next.js

Tools & Technologies: GCP, AWS, Cloud Run, Azure, Docker, OpenAI API, Figma, NoSQL, Sheets, Git
